Regarding claim 1, Chen shows in Figs. 1-2 an upper pen tube (7) and a lower pen tube (5 & 6); the upper pen tube including a light emitting device (2), and a push-and-brake device (4) for driving the light emitting device to move; the lower pen tube including an outer tube (5 & 6), an inner tube (Fig. 4, 52, i.e., water chamber) in the outer tube, a refill (71) in the inner tube, an resilient spring in the inner tube and below the refill, and a light guide tube (54, i.e., liquid) in the inner tube and being passed by an upper section of the refill; wherein a top of the light guide tube resists against a lower end of the light emitting device; a surface of the inner tube is coated with film (55, i.e., display item) having advertising patterns or texts thereon; the film includes two parts with one part being a transparent surface and another part being an opaque surface for printing with pattern or texts; the transparent surface has no pattern or text thereon; when the light emitting device lights up, light transmits into the inner tube through the light guide tube and then emits out from the inner tube; the light emits from the through the outer tube to radiate into a paper to be written (Cols. 2-3).

Regarding claim 2, Chen shows in Figs. 1-2 that predetermined parts of a lower end of an outer tube of the upper pen tube are hollowed to form a pattern and a position of the pattern is aside the light emitting device.

Regarding claim 3, Chen shows in Fig. 2 that the light guide tube is integrally formed with the refill.

Regarding claim 4, Chen shows in Fig. 2 that the patterns or textures on the film are concave or convex from a surface of the film.

Regarding claim 5, Chen shows in Fig. 1 that the film (55) on the surface of the inner tube is above a section (6) which is held by fingers of a writer.
